

Time: 3 Hours

Marks: 80

- Note: 1. Question 1 is compulsory  
 2. Answer any three out of the remaining five questions.  
 3. Assume any suitable data wherever required and justify the same.

**Q1** a) Distinguish between Name node and Data node. [5]

b) List and explain the core business drivers behind the NoSQL movement. [5]

c) Mention four characteristics of big data. Elaborate these characteristics with respect to social media websites. [5]

d) List and explain the different issues and challenges in data stream query processing. [5]

**Q2** a) What is a key-value store? What are the benefits of using a key-value store? [10]

b) Write a map reduce pseudo code to multiply two matrices. Apply map reduce working to perform following matrix multiplication.

$$\begin{array}{cccc} 1 & 2 & 6 & 7 \\ & X & & \\ 3 & 4 & 8 & 9 \end{array}$$

**Q3** a) Suppose the stream is  $S = \{2, 1, 6, 1, 5, 9, 2, 3, 5\}$ . Let hash functions  $h(x) = ax + b \bmod 16$  for some  $a$  and  $b$ , treat result as a 4-bit binary integer. Show how the Flajolet- Martin algorithm will estimate the number of distinct elements,  $h(x) = 4x + 1 \bmod 16$ . [10]

b) Consider the following data frame given below: [10]

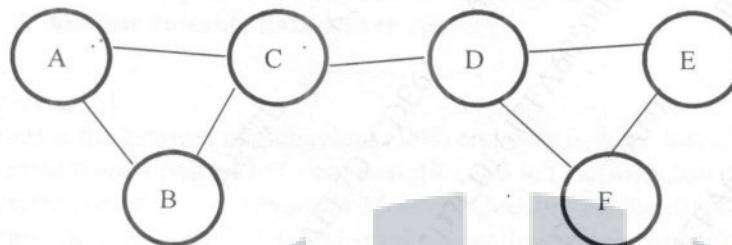

course	id	class	marks
1	11	1	56
2	12	2	75
3	13	1	48
4	14	2	69
5	15	1	84
6	16	2	53

- i. Create a subset of course less than 3 by using [ ] brackets and demonstrate the output.
- ii. Create a subset where the course column is less than 3 or the class equals to 2 by using subset () function and demonstrate the output.

**Q4** a) Explain natural join and grouping and aggregation relational algebraic operation using MapReduce. [10]

b) With a neat sketch, explain the architecture of the data-stream management system. [10]

- Q5** a) Determine communities for the given social network graph using Girvan-Newman algorithm. [10]

- b) List and discuss various types of data structures in R. [10]
- Q6** a) i. The following table shows the number of units of different products sold on different days: [10]

Product	Monday	Tuesday	Wednesday	Thursday	Friday
Bread	12	3	5	11	9
Milk	21	27	18	20	15
Cola Cans	10	1	33	6	12
Chocolate bars	6	7	4	13	12
Detergent	5	8	12	20	23

Create five sample numeric vectors from this data.

- ii. Name and explain the operators used to form data subsets in R.
- b) Define collaborative filtering. Using an example of an e-commerce site like flipkart or amazon describe how it can be used to provide recommendation to users. [10]
